(Make notes here unique for this file)

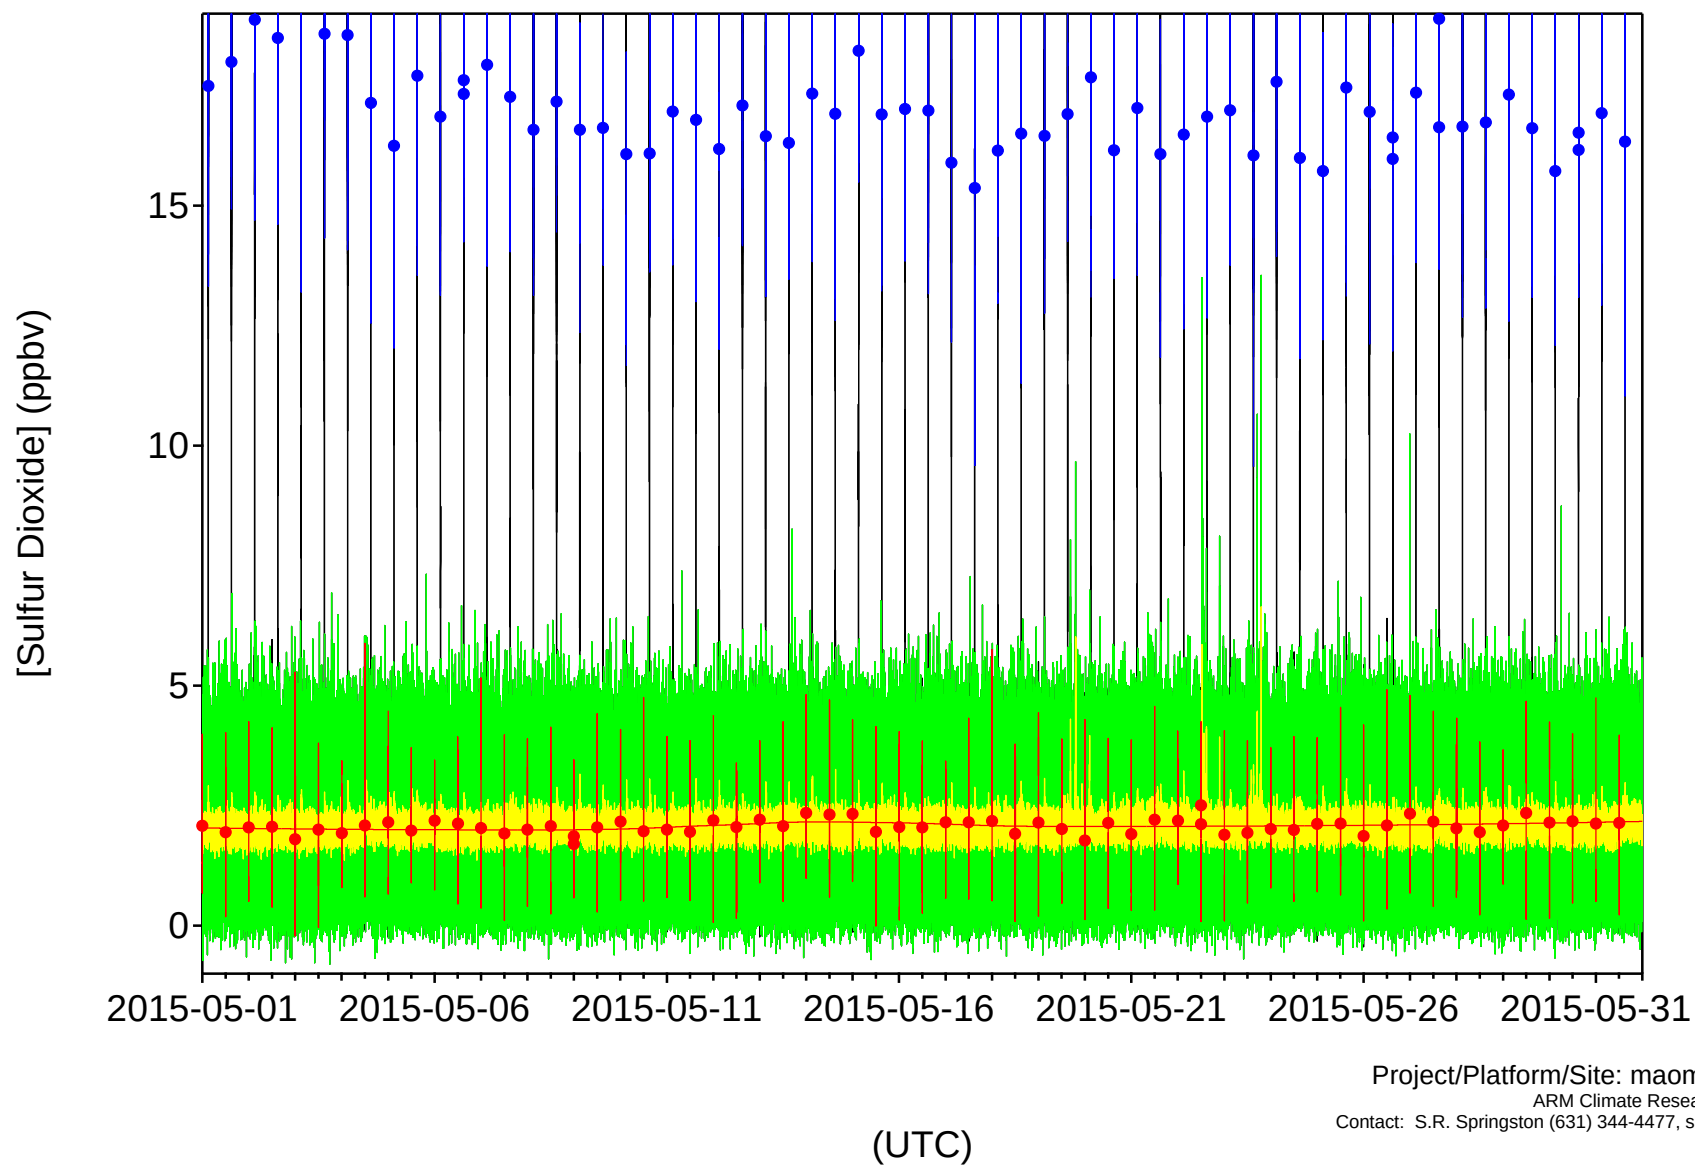

Loading 2015-05-01 - 2015-06-01

Data loaded from DMF. Files detarred, unzipped and names restored

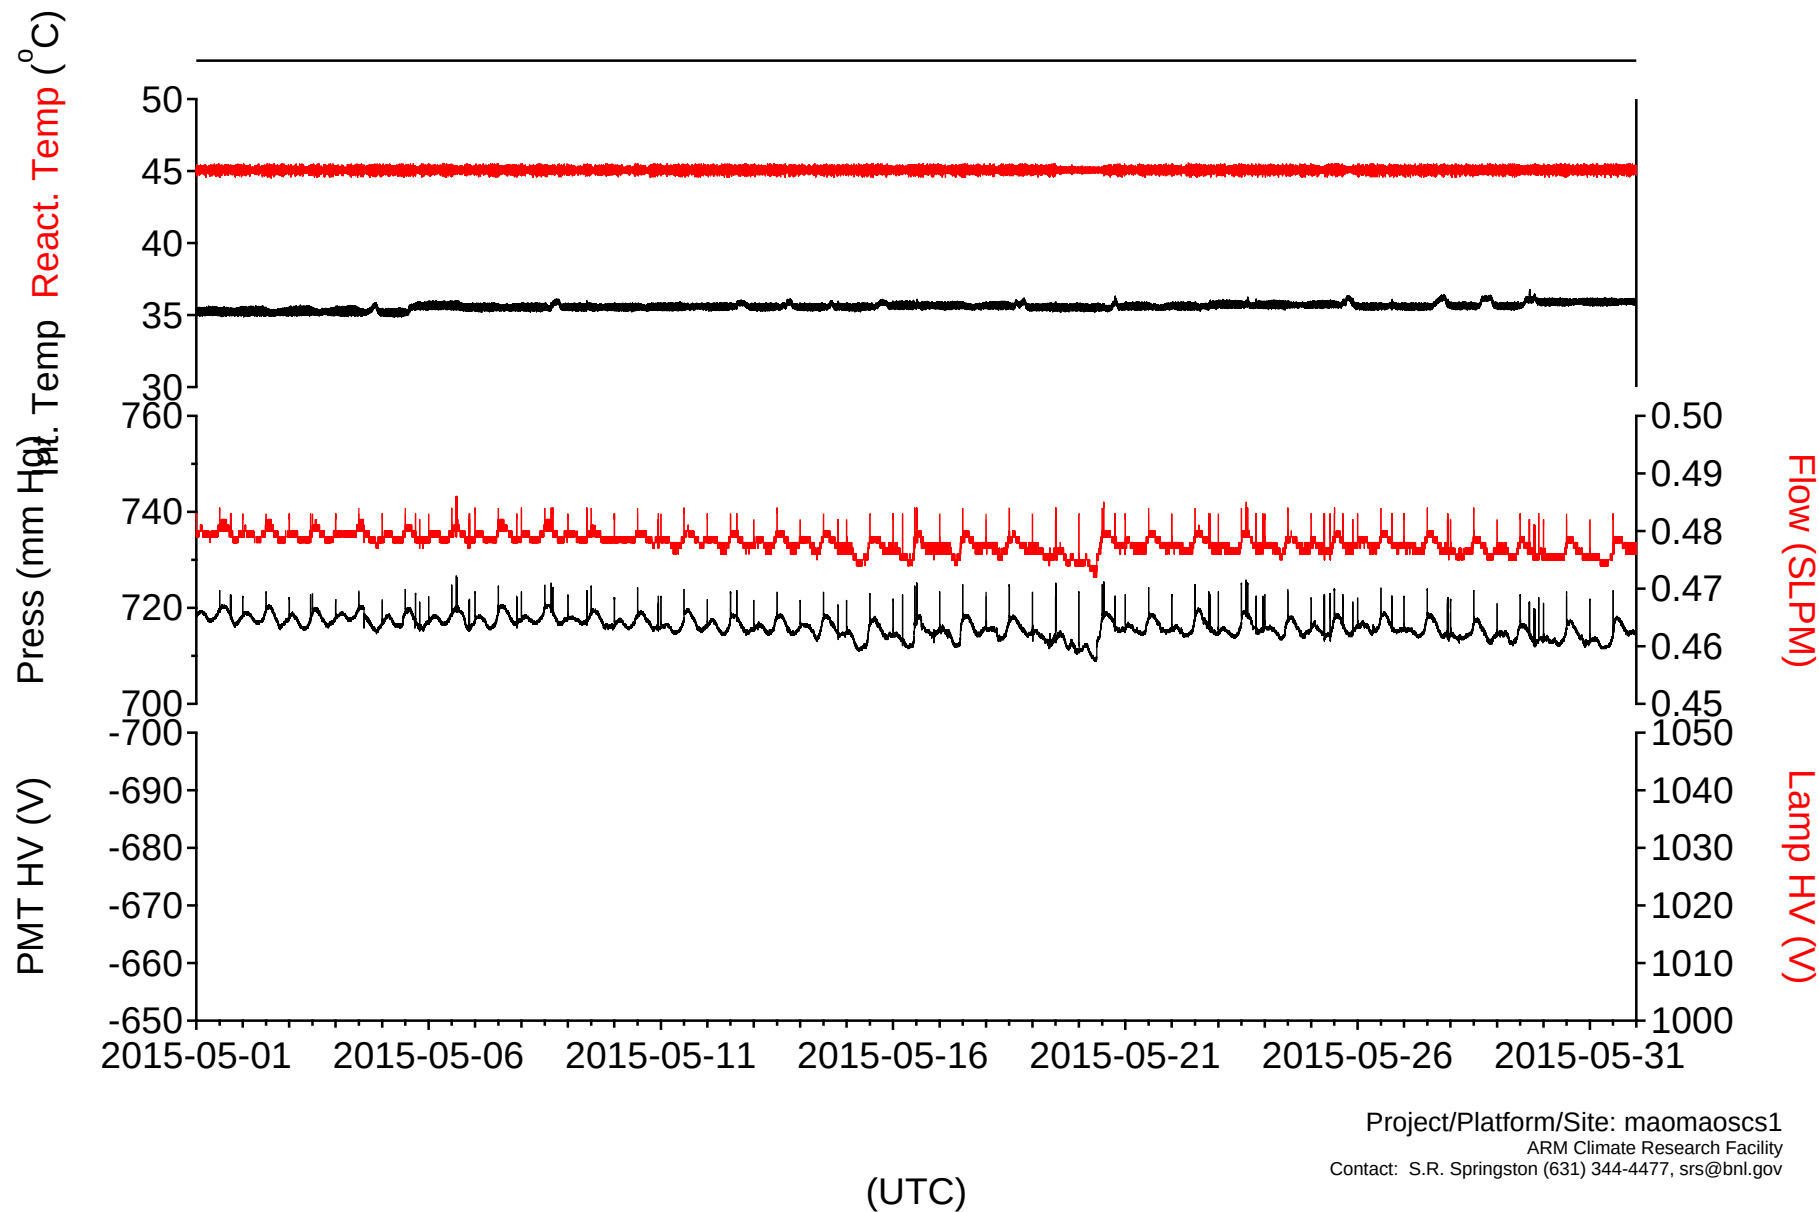

Processed SO₂ data normally. These data are taken with a ~10-s time constant on the instrument.

Ambient data appear reliable. There is a time lag after the standard additions where a slight signal shows up as the calibration line flushes out.
